

OPEN-SOURCE · LOCAL-FIRST

Mini Brain

A second brain you can **talk to**. Type or speak a thought — it sorts it, connects it, and talks back.

Swipe →

Your thoughts, floating

Dump a thought by voice or text. It flies into a glowing bubble, sized by how much lives inside.

Every thought, a synapse

An interactive graph links thoughts by category, shared words, #tags and [[wikilinks]].

Search, filter, tidy

A clean feed with live category filters, instant search, and a badge for how each thought arrived.

Tune the brain

A typed, unit-tested keyword engine sorts everything offline. Adjust the rules — and the voice — live.

What's on your mind, Sahil?

Ctrl+Enter to save · Ctrl+M to talk

Save

14 thoughts in here. Ambitious of you to call this a brain.

What I call you

Sahil

Save

Categories and keywords drive auto-sorting. A thought needs a score of at least 2 to leave Inbox; ties also land in Inbox. Single-word keywords also match simple plurals (interview → interviews). Click a keyword to cycle its weight (×1 → ×2 → ×3). Changes save instantly.

Merge seed keywords

AI voice replies

off

When on, each captured thought (plus recent thoughts for context) is sent from this browser straight to the provider, and the reply is spoken by the same voice. Costs per use on your key. The key is stored only in this browser. When off — or if a call fails — the offline assistant answers instead.

It knows your name

It greets you by name, welcomes you once a day, and nudges each thought with an actual next step.
